Escalade Nominated for 2014 Elevatori Hi-Tech Award

ELEVCON, PARIS, July 10, 2014 – During the 20th International Congress on Vertical Transportation Technologies (ELEVCON 2014 PARIS), a panel of judges nominated Escalade Innovative Solutions for the 2014 Elevatori Hi-Tech Award.

The award goes to "the best technical paper relevant to state-of-the-art technique subjects." The panel of judges, consisting of directors from the IAEE and delegates of Elevatori magazine, nominated Escalade's submission, "Advantages of Implementing M2M and Cloud Services in Retrofitted Elevators."

The paper, written by Guy Gotlieb, Escalade's VP of Marketing and Business Development, outlines new connected elevator applications. These technologies have the power to transform legacy elevators into "intelligent elevators," providing added-value to elevator companies, property managers and passengers.

The Escalade article is especially relevant because millions of elevators in Europe and North America are required to be retrofitted due to new mandatory safety and accessibly regulations. Recent developments in M2M (machine-to-machine) and cloud-hosted platforms are changing the way machines communicate and integrate with each other in highly efficient and cost-effective ways. These developments are just starting to enter the elevator market with the capability of providing significant benefits to existing elevators.
